

Solutions

falmec

Innovation is in the air: solutions for a new quality of life
Thanks to a decade-long evolution of technology and design, that has transformed new needs and lifestyles into concrete solutions that improve everyday life, Falmec has become an industry benchmark when it comes to kitchen aspiration.

Genius. Experience. Research. Passion. Attention

A product culture: the real made in Italy

Every Falmec product is conceived, developed and manufactured entirely in Vittorio Veneto, near Venice.

In this area, known as the “stainless steel valley”, artisanal traditions have evolved into one of the most important steel processing industrial districts in Italy. Falmec combines its knowledge of raw materials and unique personal skills with advanced industrial processes. Its shared product culture is expressed through the perfect balance between creativity and practicality, giving life to achievements of excellence in which every detail counts.

Dialogue System:
connecting your hood and hob
Through the Dialogue System
it is now possible to control
the different functions of the
hood directly from the hob,
where a touch control has
been integrated.
The dialogue between hob
and cooker hood takes place
via radio frequency and does
not require any other receiving
devices to be installed
in the hood.

Virgola No-Drop Touch

 **No-Drop System:** catches and eliminates condensation. Our No-Drop System is an innovative technology that prevents the formation of condensation caused by cooking vapour, an unpleasant yet common occurrence, especially when using induction hobs. The No-Drop System consists of a set of cross-bladed filters designed to condense vapour and funnel it into a special collector. The result is a dry and healthy kitchen environment.

≡ *Multi-Air: ultra-powerful filtration
with ultra-compact dimensions*

Multi-Air technology has revolutionised the traditional concept of suction - which normally concentrates on a single point - by dividing it between multiple ultra-compact horizontally distributed

motors. The advantages are manifold: increased silence, homogeneous suction and, last but not least, a design with reduced height and thickness, in line with contemporary aesthetic tastes.

© Circle.Tech:

filtration has a new form

Circle.Tech technology represents a change in perspective when compared to traditional hoods, in that it extends horizontally rather than vertically. Its circular shape allows you to obtain the largest filtering surface in small spaces, without forgoing excellent

performance in terms of suction, filtration and reduced noise. With Circle.Tech, fumes do not have to be ducted, rendering it therefore not only versatile, but also simple to install in any space. The air is purified and cooking odours and moisture are eliminated thanks to the Carbon.Zeo Microtech combined filter.

✓ *Silence NRS®: the importance of acoustic comfort*

The extreme power of the hood motor is often exacerbated by an equally loud operating noise. Falmec has succeeded in combining the highest levels of performance and

acoustic well-being with its Silence NRS (Noise Reduction System) technology, a system that was developed in collaboration with laboratories specialising in fluid dynamics, making it possible to create incredibly silent hoods.
